The process of Ukraine's European integration involves not only political and economic changes but also sociocultural aspects, among which team spirit plays a significant role. The publication addresses the pressing issue of decreasing physical activity among schoolchildren in Europe, resulting from the consequences of the COVID-19 pandemic and the state of war in Ukraine. Special attention is paid to Ukrainian children who have become refugees (including those with special educational needs), having been forced to leave the country and adapt to new living conditions in the EU. The research is being carried out within the framework of the TEAM-EU-UA project, which aims to facilitate children's social integration through sports, foster team spirit, and disseminate European values.

Modern European society is faced with the problem of decreasing physical activity levels among schoolchildren, a consequence of the COVID-19 pandemic. At the same time, Europe faces challenges related to the growing number of refugees and migrants seeking safe conditions for living and studying, which places additional pressure on the education system and social services [1].

Meanwhile, the imposition of martial law in Ukraine has led to the mass displacement of Ukrainian children abroad, affecting not only their social life but also their physical development. In this context, the implementation of the "Development of Team Spirit for

the Implementation and Integration of EU Values in Ukraine” (TEAM-EU-UA) project, co-funded by the European Union, takes on particular significance.

The project also envisages creating conditions for the active social integration of Ukrainian schoolchildren, including refugees, through sports and team interaction. It is being implemented by cooperating with several institutions and organizations from Ukraine and EU countries. In particular, the project involves the European School Sports Federation (Brussels, Belgium), the Institute for Sports and Education Development (Warsaw, Poland), the Ukrainian Federation of School Sports (Kyiv, Ukraine), Sumy State Pedagogical University named after A.S. Makarenko (Sumy, Ukraine). It is coordinated by the NGO *“YOUTH. SCIENCE. SPORT. HEALTHY MOVEMENT OF UKRAINE.”* Through the joint efforts of these partners, the project will foster European values among children and youth, including equality, respect for human rights, and mutual support [2].

One of the most serious current challenges is the forced displacement of a large number of Ukrainian children due to the state of war in the country. A significant portion of them have ended up in EU countries. According to UN analytical data, following the start of the full-scale invasion, over 8 million Ukrainians have taken refuge in European countries, including about 1.4 million children. As of 2024, the highest numbers of registered Ukrainian refugees are in Germany (1,140,000), Poland (957,000), and the Czech Republic (363,000) [3; 4]. It highlights the importance of international cooperation and the need to expand initiatives that support their adaptation.

The project aims to support schoolchildren, mainly displaced and internally displaced persons, by engaging them in sports and an active lifestyle. Special attention will be paid to providing psychological support through sporting events and developing social skills. The project will popularize various sports and physical activities and nurture a healthy generation with a well-rounded development of physical and spiritual qualities [2].

An essential aspect of the project is also preparing Ukrainian students to organize sports events for children, enabling them to work effectively with various categories of students, including displaced children.

Developing team spirit through sports is essential to integrating European values in Ukraine. The TEAM-EU-UA project will enable the effective creation of conditions for cohesion and social adaptation among young people, particularly displaced children who face adaptation challenges in new countries. Further development of similar initiatives requires expanding partnerships, involving more participants, and actively supporting them from educational and governmental institutions.
